

# Display Signs DB-series

PINTSCH ABEN's Display Signs DB-series are equipped with an extremely reliable electronic display unit. Their appearance is very striking: yellow digits on a black background, surrounded by a brightly lighted red edge.

Important part of the Display Signs DB-Series is the integrated electronic control system which attenuates the input signal and enables stilled data read-out. As a result of this dashing and/or wash of waves will not effect display indication.

In case of input signal failure or fall-out of power supply, the display will automatically show 3 horizontal stripes. Confusion caused by "locked digits" is out of the question.

The aluminium mounting box is resistant against strongly changing weather conditions. Dimensions are in compliance with naval regulations.

## FEATURES:

- ☛ Practically maintenance-free
- ☛ 4 - 20 mA or RS232 input signal
- ☛ Durable TL-lighting
- ☛ Integrated signal attenuation
- ☛ Easy installation at every location
- ☛ Floating-point notation possible

Erection of Depth Indication Display Sign (Ijmuiden, the Netherlands)

## APPLICATIONS:

- Depth indication of lock sill
- Head room indication of bridges

(display sign, 4-03-2008.hh)
